Learn Julia in Y minutes (2)

Get the code: learnjulia.jl

Control Flow

Tuples are immutable.

MethodError(setindex!,(:tup,3,1))

```
tup = (1, 2, 3) # => (1,2,3) # an (Int64,Int64,Int64) tuple.
tup[1] # => 1
try:
    tup[1] = 3 # => ERROR: no method setindex!((Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64,Int64
```

Many list functions also work on tuples

```
length(tup) # => 3
tup[1:2] # => (1,2)
in(2, tup) # => true
```

You can unpack tuples into variables

a, b, c =
$$(1, 2, 3)$$
 # => $(1,2,3)$ # a is now 1, b is now 2 and

Tuples are created even if you leave out the parentheses

d, e, f = 4, 5, 6 # =>
$$(4,5,6)$$

A 1-element tuple is distinct from the value it contains

Look how easy it is to swap two values

e, d = d, e
$$\# \Rightarrow (5,4) \# d \text{ is now 5 and e is now 4}$$

Dictionaries store mappings

```
empty_dict = Dict() # => Dict{Any,Any}()
```

You can create a dictionary using a literal

```
filled_dict = Dict("one"=> 1, "two"=> 2, "three"=> 3)
# => Dict{ASCIIString, Int64}
```

Look up values with []

```
filled_dict["one"] # => 1
```

Get all keys

```
keys(filled_dict)
# => KeyIterator{Dict{ASCIIString,Int64}}(["three"=>3, "one"=>...
```

Note

dictionary keys are not sorted or in the order you inserted them.

Get all values

```
values(filled_dict)
```

```
# => ValueIterator{Dict{ASCIIString,Int64}}(["three"=>3,"one"=
```

Note - Same as above regarding key ordering.

Check for existence of keys in a dictionary with in, haskey

```
in(("one" => 1), filled_dict) # => true
in(("two" => 3), filled_dict) # => false
haskey(filled_dict, "one") # => true
haskey(filled_dict, 1) # => false
```

Trying to look up a non-existent key will raise an error

```
filled_dict["four"] # => ERROR: key not found: four in ge
catch e
    println(e)
end
```

UndefVarError(:filled dict)

Use the get method

to avoid that error by providing a default value

```
get(dictionary,key,default_value)
get(filled_dict,"one",4) # => 1
get(filled_dict,"four",4) # => 4
```

Use Sets to represent collections of unordered, unique values

Initialize a set with values

Add more values to a set

```
push!(filled_set,5) # => Set{Int64}(5,4,2,3,1)
```

Check if the values are in the set

```
in(2, filled_set) # => true
in(10, filled_set) # => false
```

There are functions for set intersection, union, and difference.

```
other_set = Set([3, 4, 5, 6]) # => Set{Int64}(6,4,5,3) intersect(filled_set, other_set) # => Set{Int64}(3,4,5) union(filled_set, other_set) # => Set{Int64}(1,2,3,4,5,6) setdiff(Set([1,2,3,4]),Set([2,3,5])) # => Set{Int64}(1,4)
```

Control Flow

Let's make a variable

$$some_var = 5$$

Here is an if statement. Indentation is not meaningful in Julia.

For loops iterate over iterables.

```
Iterable types include Range, Array, Set, Dict, and AbstractString.

julia> for animal=["dog", "cat", "mouse"]
    println("$animal is a mammal")
    # You can use $ to interpolate variables or expression in
end
dog is a mammal
cat is a mammal
mouse is a mammal
```

You can use 'in' instead of '='.

```
julia> for animal in ["dog", "cat", "mouse"]
    println("$animal is a mammal")
end
dog is a mammal
cat is a mammal
mouse is a mammal
```

Example

cat is a mammal dog is a mammal

```
julia> for a in Dict("dog"=>"mammal","cat"=>"mammal","mouse"=>
    println("$(a[1]) is a $(a[2])")
end
mouse is a mammal
```

Example

```
julia> for (k,v) in Dict("dog"=>"mammal","cat"=>"mammal","mous
    println("$k is a $v")
end
mouse is a mammal
```

mouse is a mammal cat is a mammal dog is a mammal

While loops loop while a condition is true

```
julia> x = 0
0
julia> while x < 4
    println(x)
    x += 1 # Shorthand for x = x + 1
end
0
1
2
3</pre>
```

Handle exceptions with a try/catch block

```
try
    error("help")
catch e
    println("caught it $e")
end
# => caught it ErrorException("help")
```
